

Configuration Management of Common Federal Credential

**Tony Cieri
IAB**

Discussion

- **End State Scenario-** Interoperability. How to ensure that a CAC (example) can be trusted and **used** by a bearer not only within the DoD infrastructure but also when that bearer is at DoS, GSA, etc.
- The Federated environment
- Present focus: deployment
- Upcoming 18 months- Policy/process to address the issues of Configuration Management across and among agencies if that end state is to be achieved.
